

Turnitin does not determine whether a paper has or has not been plagiarized. Similarity Reports are simply tools to help instructors locate potential sources of plagiarism, or text which may have been incorrectly cited. Therefore, only instructors can deem what is a "good" or "bad" score, as interpretation of the data can only be made by the instructor.

Turnitin Color

Similarity	Color Icon
0%	Blue Icon
1-24%	Green Icon
25-49%	Yellow Icon
50-74%	Orange Icon
75-100%	Red Icon

Once the percentage icon is visible, you can click on the colored icon for the full report.

Similarity Report Layers

With the help of physical therapy and new technology today are people with Cerebral Palsy getting better? Before I start the reason, I found this topic so interesting is because I wanted to find out the effects it has on family physically and mentally. For the people unfamiliar with Cerebral Palsy it is a congenital disorder of movement, muscle tone, or posture. The cause of Cerebral Palsy is a brain injury or brain deformity that occurs while the brain is in development. Because of the brain damage during brain development a child's muscle control, muscle coordination, muscle tone, reflex, posture and balance is affected. Symptoms include exaggerated reflexes, floppy or rigid limbs, and involuntary motions, these symptoms occur by early childhood. According to WebMD (2005-2018), "There are four types of spastic CP, grouped according to how many limbs are affected." Long-term treatment includes physical and other therapies, drugs, and sometimes if severe surgery.
