

Zoom Share Screen

[Back to Zoom Meeting Screen](#)

After you click “Share” a box will pop open asking which screen you would like to share.

It will show every screen you currently have open on your device.

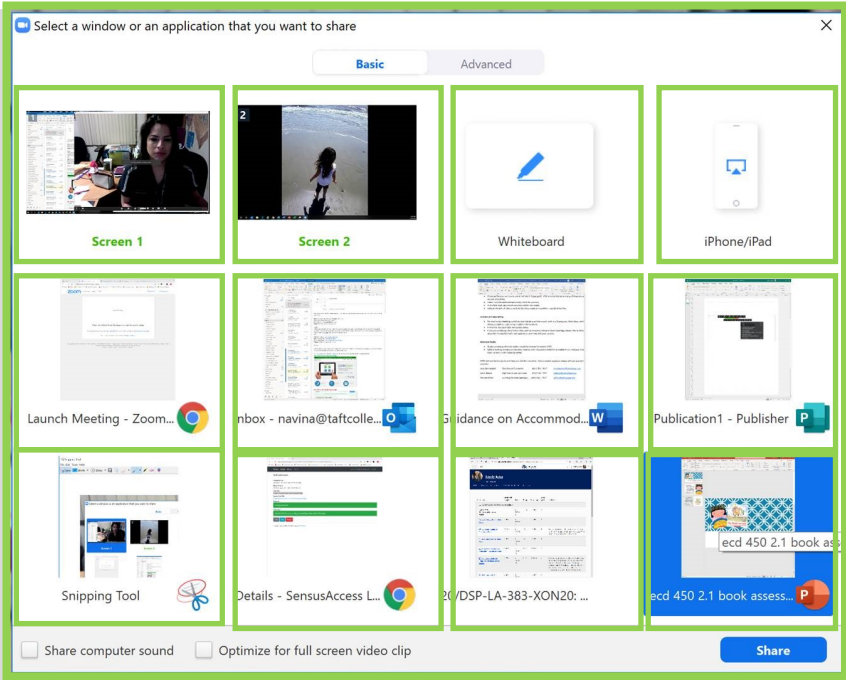

How to pick the right screen:

- Will you be using **more than one** application in your presentation/video? If so, you will want to share your **whole screen** (Screen 1 or Screen 2) versus a specific application screen.
- If you are going to be sharing one item only (PowerPoint, canvas screen, a video, etc) you can select a **specific App Screen**.

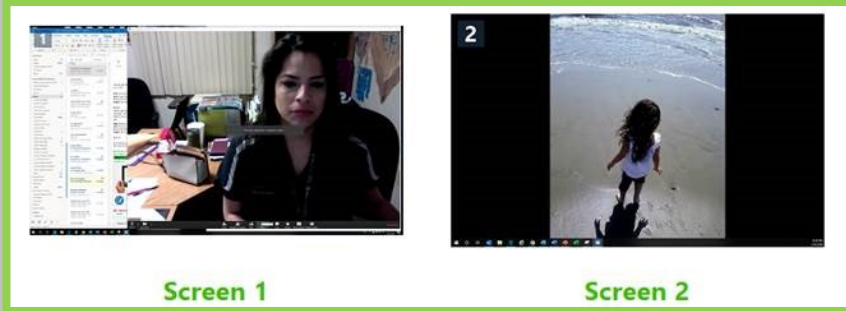

Tip: When Sharing your **whole screen**, adjust the windows on your desktop as you will record the whole screen.

Tip: Each share screen option will display the icon of the app for easy selection.

Tip: If you **do not see your document**, “X” out of this box, and go to the document you’d like to share. Open it. Then go back to “share”. You should see it listed.

Whole Screen– Any application you open will be captured during the recording. **If you have Dual Monitors you will see 2 screen options.**

Specific App Screens
One screen will be captured during recording.
